Client Project Portfolio

Enterprise Resource Planning Project - Public Sector

Role: Oracle Developer Consultant
Duration: 01/12/25 - Present

Overview

Experienced Oracle consultant providing technical delivery and operational support across Oracle EBS environments and integrated enterprise systems. Responsible for application support, incident management, root cause analysis, release activities, data validation, and system enhancements. Worked closely with business and technical stakeholders to ensure service stability, successful project delivery, and continuous improvement of business-critical applications.

Key Contributions

Application Support & Incident Management

- Managed and resolved application incidents, service requests, and technical issues using ServiceNow, ensuring timely resolution and effective stakeholder communication.
- Conducted complex technical investigations and root cause analysis to identify and permanently resolve recurring system issues.
- Provided operational support for business-critical Oracle EBS processes, maintaining system stability and performance.

System Analysis & Development

- Developed and maintained solutions using SQL, PL/SQL, and Oracle EBS technologies.
- Performed impact assessments, defect analysis, and technical troubleshooting across integrated enterprise systems.
- Supported the full Software Development Lifecycle (SDLC), including requirements gathering, testing, defect management, deployment activities, and post-release support.

Release Management & Deployment

- Coordinated and supported release management activities, including configuration validation, deployment planning, and production implementation.
- Utilised GitHub-based release processes and Unix/Linux environments to support controlled software deployments.
- Ensured successful release execution through testing, validation, and stakeholder coordination.

Data Validation & System Integration

- Led data validation, reconciliation, and migration activities across multiple interconnected systems.
- Supported large-scale environment refreshes and integration testing to maintain data integrity and operational continuity.
- Worked with cross-functional teams to investigate integration issues and improve end-to-end system reliability.

Leadership & Stakeholder Management

- Acted as a trusted delivery lead for operational and project-based activities, coordinating resources and managing delivery risks.
- Translated complex technical concepts into business-focused updates for stakeholders at varying levels.
- Promoted knowledge sharing, continuous improvement, and collaborative team working practices.

Tools & Technologies

- Oracle E-Business Suite (EBS) – Finance Modules – AR, AP, GL
- SQL, PL/SQL
- Oracle SQL Developer
- Unix/Linux
- ServiceNow
- GitHub
- Enterprise System Integrations
- Release & Deployment Management
- Data Migration & Reconciliation

Impact

- Improved application stability through proactive incident management and sustainable root-cause resolutions.
- Increased service performance and reliability across business-critical Oracle platforms.
- Successfully delivered release and deployment activities while minimising operational risk.
- Enhanced data accuracy and integrity through rigorous validation and reconciliation processes.
- Strengthened collaboration between technical and business stakeholders, supporting successful project and operational outcomes.

Internal Technical Cloud Project

Role: Oracle Developer Consultant
Duration: 17/02/25 - Present

Overview
As part of an internal project, I contributed to application development, data analysis, and system integration. My role focused on leveraging SQL/PLSQL, Oracle APEX, and Oracle Integration Cloud to deliver scalable solutions and streamline workflows.

Key Contributions

- **Data Analysis & Development**
    - Analysed and manipulated datasets using **SQL** and **PL/SQL** within Oracle SQL Developer.
    - Designed queries and scripts to support reporting, performance checks, and business processes.
- **Application Development**
    - Built and customized applications using **Oracle APEX** and **Visual Builder Studio (VBS)**.
    - Developed user-friendly interfaces and workflows to support agile innovation initiatives.
- **System Integration**
    - Created and mapped integrations with **Oracle Integration Cloud**, enabling seamless data flow between applications.
    - Documented integration processes to ensure transparency and reproducibility.
- **Tools & Technologies**
    - Oracle SQL Developer (SQL, PL/SQL)
    - Oracle APEX, Visual Builder Studio (VBS)
    - Oracle Integration Cloud
- **Impact**
    - Enhanced agility of internal Oracle applications by streamlining development and integration workflows.
    - Improved data accessibility and reporting accuracy through optimized SQL queries.
    - Strengthened collaboration across teams by delivering scalable, integrated solutions.

Data Migration Project – Engineering Industry

Role: Data Consultant
Duration: 11/11/2024 – 10/02/2025

Overview
Within an Engineering Industry Project, I contributed to data migration and documentation efforts within the Oracle Platform-as-a-Service (PaaS) environment. My role combined technical development with client-facing responsibilities, ensuring smooth migration processes and clear communication across workshops.

Key Contributions

- **Data Migration & Documentation**
    - Assisted in junior-level data migration tasks, ensuring accuracy and consistency across systems.
    - Recorded minutes during client workshops to capture requirements, decisions, and action items.
    - Produced clear documentation to support migration processes and knowledge transfer.
- **SQL & PL/SQL Development**
    - Utilized Oracle SQL Developer to write and test SQL and PL/SQL scripts.
    - Supported database queries, updates, and performance checks during migration.
    - Collaborated with senior developers to troubleshoot and refine scripts.
- **Client Collaboration**
    - Participated in workshops with stakeholders to align technical solutions with business needs.
    - Communicated progress and challenges effectively, contributing to project transparency.
- **Tools & Technologies**
    - Oracle SQL Developer (SQL, PL/SQL)
    - Oracle PaaS environment
    - Microsoft Office Suite (documentation, minutes)
- **Impact**
    - Supported successful migration of client data into Oracle PaaS systems.
    - Improved clarity of project communication through detailed workshop documentation.
    - Strengthened technical skills in SQL/PLSQL development within a real-world enterprise project.

Data Science Internal Project

Role: Data Consultant
Duration: 06/06/2024 -11/11/2024

Overview
As part of an internal Data science project, I developed data science workflows to analyze and visualize live datasets. The project focused on applying machine learning and statistical techniques to uncover insights and present them in a clear, visual format.

Key Contributions

- **Data Analysis & Visualization**
    - Utilized Pandas for data cleaning, manipulation, and exploratory analysis.
    - Created visualizations with Matplotlib and Seaborn to identify trends and correlations.
    - Applied **TensorFlow** to build and test predictive models on live datasets.
- **Workflow Development**
    - Designed reproducible Jupyter Notebook workflows for data ingestion, analysis, and visualization.
    - Documented processes to ensure transparency and knowledge sharing.
- **Presentation & Communication**
    - Prepared visual dashboards and charts to communicate findings to summit participants.
    - Highlighted actionable insights that could inform decision-making and strategy.
- **Tools & Technologies**
    - Pandas, Matplotlib, Seaborn, TensorFlow
    - Jupyter Notebooks
    - Python
- **Impact**
    - Delivered clear, data-driven insights to summit participants.
    - Improved understanding of live dataset trends through interactive visualizations.
    - Demonstrated practical application of machine learning libraries in a collaborative setting.

Internal Functional Project - Learning Platform Development

Role: Functional Consultant & Trainer
Duration: 10/01/2024 – 11/11/2024

Overview
I collaborated within a technical and functional team to design and deliver an upgraded training platform for new SAP functional consultants. The project focused on enhancing the SAP 101 learning framework and building SAP 102 as a more advanced, interactive learning environment.

Key Contributions

- **Learning Platform Development**
    - Co-created a comprehensive PowerPoint presentation deck with the team, covering SAP 102 functional processes.
    - Populated and integrated the deck into Degreed, forming a structured learning platform accessible to new consultants.
    - Ensured the SAP 102 platform built upon SAP 101 foundations, providing a clear progression path for learners.
- **Training & Knowledge Transfer**
    - Designed content to be engaging, modular, and aligned with SAP functional consultant onboarding needs.
    - Delivered sessions and supported new consultants in navigating the upgraded platform.
- **Tools & Technologies**
    - Microsoft PowerPoint (content creation)
    - Degreed (learning platform integration)
- **Impact**
    - Successfully launched SAP 102 as an upgrade to SAP 101, improving onboarding efficiency.
    - Enhanced consultant readiness by providing structured, accessible training materials.
    - Strengthened knowledge transfer within the internal SAP team, reducing ramp-up time for new hires.

Telecommunications Project – Service Delivery Management

Role: Service Delivery Analyst Consultant
Duration: 01/03/2023 – 03/01/2024

Overview
Within the Telecommunications Industry, I contributed to service-level customer incident (SLCI) management and cloud-based workflow optimization. My role combined technical troubleshooting, programming, and stakeholder communication to ensure smooth operations and scalable solutions.

Key Contributions

- **Incident & Service Management**
    - Managed Jira ITSM and Kanban boards to track and resolve SLCIs and incidents.
    - Retrieved and organized customer information from CRM systems to support resolution.
    - Documented incident resolutions using Microsoft Word and Confluence for knowledge sharing.
- **Cloud & Programming Solutions**
    - Developed and maintained applications using Ruby on Rails.
    - Utilized Microsoft Azure Kubernetes Service to deploy and manage containerized applications.
    - Applied ITIL 4 methodologies for structured problem management.
- **Data Analysis & Reporting**
    - Analyzed data trends using Microsoft Excel and Datadog.
    - Produced weekly and monthly reports with Microsoft PowerPoint for client and internal review.
    - Leveraged Screenful dashboards for task management and progress tracking.
- **Collaboration & Leadership**
    - Trained new candidates and facilitated handover procedures.
    - Operate on-call, ensuring coverage and effective incident response.
    - Coordinated communication across Slack, GitHub, and Figma for planning, mind mapping, and client reporting.
- **Tools & Technologies**
    - Jira ITSM, Confluence, CRM systems, Ruby on Rails, Microsoft Azure Kubernetes Service
    - Excel, PowerPoint, Word, Datadog, Screenful, ITIL 4 methodology, Slack, GitHub, Figma
- **Impact**
    - Streamlined incident resolution processes, reducing average resolution time.
    - Improved visibility of data trends for proactive issue management.
    - Strengthened team collaboration and client communication, ensuring consistent service delivery.
